

System Integration Mini Project **BPMN**

Assignment

Objectives

The main objective of this task is to help you understand the business context of system integration and to provide practical experience in modelling and automation of business processes by implementation of standard methods and notation.

Tasks

The task is to design and implement one business process – a workflow, which integrates several disparate operations (applications or services), in BPMN.

The business process would be associated with your exam project.

Requirements

It is a teamwork.

The solution consists of both graphical and xml representation of the business process, and the associated applications.

A [readme.md](#) file should introduce the business scenario and the authors' identification.

There is no requirement for using specific programming languages or development platforms.

Presentation and Demonstration

A Github link to the project solution must be uploaded to Peergrade.

Grading of own and other applications will be required.

Some of the solutions will be presented in class.

The successful completion of this assignment brings 15 credits.
